Sample University Syllabus

Course: Engineering Mathematics (MA101)

Credits: 4

Course Description

This sample syllabus is intended for academic demonstration in a React application. It outlines the major topics, learning objectives, assessment pattern, and references typically found in an engineering curriculum.

Unit-wise Syllabus

Unit 1: Calculus and Applications - Overview, theory, examples, numerical problems and applications.

Unit 2: Differential Equations - Overview, theory, examples, numerical problems and applications.

Unit 3: Matrices and Linear Algebra - Overview, theory, examples, numerical problems and applications.

Unit 4: Vector Calculus - Overview, theory, examples, numerical problems and applications.

Unit 5: Probability and Statistics - Overview, theory, examples, numerical problems and applications.

Course Outcomes

CO1. Apply calculus.

CO2. Solve engineering equations.

CO3. Use matrices.

CO4. Analyze data.

Assessment Pattern

Internal Assessment: 30 Marks
End Semester Examination: 70 Marks
Practical/Lab: As applicable.

Reference Books

1. Standard university textbook.
2. Recommended reference by leading authors.
3. Online documentation and lecture notes.
