

Sample University Syllabus

Course: Programming in C (CS102)

Credits: 4

Course Description

This sample syllabus is intended for academic demonstration in a React application. It outlines the major topics, learning objectives, assessment pattern, and references typically found in an engineering curriculum.

Unit-wise Syllabus

Unit 1: C Fundamentals - Overview, theory, examples, numerical problems and applications.

Unit 2: Decision & Loops - Overview, theory, examples, numerical problems and applications.

Unit 3: Functions - Overview, theory, examples, numerical problems and applications.

Unit 4: Arrays & Strings - Overview, theory, examples, numerical problems and applications.

Unit 5: Pointers - Overview, theory, examples, numerical problems and applications.

Unit 6: Structures & Unions - Overview, theory, examples, numerical problems and applications.

Unit 7: File Handling - Overview, theory, examples, numerical problems and applications.

Course Outcomes

CO1. Write C programs.

CO2. Use pointers.

CO3. Build modular code.

CO4. Perform file I/O.

Assessment Pattern

Internal Assessment: 30 Marks

End Semester Examination: 70 Marks

Practical/Lab: As applicable.

Reference Books

1. Standard university textbook.
2. Recommended reference by leading authors.
3. Online documentation and lecture notes.
